SAGE & HONEY

Thank you & *welcome!*

Your calm, beginner-friendly money planner is ready. Pick how you'd like to use it — you can use both.

🌐 Use it online — any device

Your private link. Bookmark it, and keep it to yourself.

https://tiddyplanner.netlify.app/sage/planner-80ef14a66457/

1. **iPhone / iPad:** open the link in Safari → tap **Share** → **Add to Home Screen**.
2. **Android:** open it in Chrome → tap ⋮ → **Install app** (or Add to Home screen).
3. **Computer:** open it in Chrome or Edge and click the **install** icon in the address bar — or just bookmark it.

💾 Use it offline — no internet needed

On a computer, download your offline file **Sage-and-Honey-Planner.html**, save it anywhere (Desktop, Documents) and double-click it to open it in your browser.

⬇ Download the offline version

On a phone or tablet, the app you added to your Home Screen keeps working offline too. Tip: always open the same file in the same browser, so your data is there each time.

⏱️ Your first 3 minutes

1. Open the planner and choose **Set up my planner** (or **Explore with sample data** to look around first).
2. Add your name, currency, today's balance and your paycheck.
3. Follow the **Getting started** checklist: bills → budget → savings fund → first spend.
4. Open **Today** once a day. Press **N** (or tap **+**) whenever you spend.

SAGE & HONEY

Good to *know*

🔒 Your data is private

Everything is saved inside your own browser on your own device. There's no account and nothing is sent to a server.

🗂️ Back it up

Settings → **Back up** saves a small file. Keep it in your cloud drive or email it to yourself. Use **Restore backup** to bring it back.

📱 Switch devices

Make a backup on device A, then open your link on device B and choose **Restore backup**. Data doesn't sync automatically.

⚠️ Don't lose your data

Clearing browsing data or using private/incognito mode can erase saved data. On iPhone, Safari can also clear a website's data after 7 days without a visit, so **add the planner to your Home Screen** and back up once in a while.

✨ Features made for busy brains

Available until payday — one calm number and a daily guide. **Until payday** — your balance day by day. **Can I afford it?** before you buy. **Fresh start** after a missed week. **Honey Nook** — Mochi & Bun, honey drops and a preview studio. **Evening recap** & gentle **challenges**. **Envelopes**, **Accounts**, **Money back** and **Fees check**. **Just today** mode, **search** (press K), heads-up reminders and bills in your phone's calendar. Irregular income? Settings → **How you get paid**.

💌 Need help?

Message me through Etsy any time — I'm happy to help you get set up. If you enjoy your planner, a review means the world to a small shop. ♡

For personal use only — please don't share or resell your link or file. Sage & Honey is a budgeting tool and does not provide financial advice.

SAGE & HONEY

Apple Pay *quick entry*

Pay with your iPhone, then open your planner and tap **Apple Pay** — the amount and shop name are filled in for you. Set it up once, in about 3 minutes. Needs an iPhone with iOS 17 or later and a card in Apple Wallet; availability depends on your country and card.

1 · Create the automation

1. Open the **Shortcuts** app → **Automation** → **+** → **Transaction**.
2. Pick your Wallet cards, choose **Run Immediately**, then **Next** → **New Blank Automation**.
3. Add a **Text** action and type **SPEND|**, then the **Amount** variable, **|**, the **Merchant** variable, **|** and **Current Date**.
4. Add **Append to Text File**: file **Shortcuts/planner-spends.txt**, with **Make New Line** on.
5. Add **Get File** (the same file), then **Copy to Clipboard**, then **Show Notification** “Open your planner to collect”.

2 · Collect your spends

Open your planner from your Home Screen and tap **Apple Pay** under your daily number. Your iPhone asks to paste: tap **Allow Paste**. New payments appear ticked — tap **Add selected**. Payments you already added are skipped automatically.

Tip: once a month you can empty **planner-spends.txt** in the Files app. Your planner remembers what it already added.

Good to know

Nothing is recorded without your tap, and nothing is sent anywhere: the Shortcut and your planner talk through your iPhone's clipboard. On a computer or Android, any shortcut tool can open your planner link ending in **#add?amount=4.50&name=Cafe** to pre-fill a spend.
